🔺 Should Fix:

Eliminate render-blocking JavaScript and CSS in above-the-fold content

Your page has 3 blocking CSS resources. This causes a delay in rendering your page.

None of the above-the-fold content on your page could be rendered without waiting for the following resources to load. Try to defer or asynchronously load blocking resources, or inline the critical portions of those resources directly in the HTML.

Optimize CSS Delivery of the following:

- http://pen.io/assets/css/foundation.min.css

- http://cdn.jsdelivr.net/medium-editor/latest/css/medium-editor.min.css

- http://pen.io/assets/css/app.css

Mobile

🔸 Consider Fixing:

Leverage browser caching

Setting an expiry date or a maximum age in the HTTP headers for static resources instructs the browser to load previously downloaded resources from local disk rather than over the network.

[Leverage browser caching](#) for the following cacheable resources:

- https://www.google.com/recaptcha/api.js (5 minutes)

- https://www.google-analytics.com/analytics.js (2 hours)

- http://pen.io/assets/css/app.css (4 hours)

- http://pen.io/assets/css/foundation.min.css (4 hours)

- http://pen.io/assets/js/app.js (4 hours)

- http://pen.io/assets/js/vendor/foundation.js (4 hours)

- http://pen.io/assets/js/vendor/jquery.js (4 hours)

- http://pen.io/assets/js/vendor/what-input.js (4 hours)

Minify JavaScript

Compacting JavaScript code can save many bytes of data and speed up downloading, parsing, and execution time.

[Minify JavaScript](#) for the following resources to reduce their size by 71.5KiB (50% reduction).

- Minifying http://pen.io/assets/js/vendor/jquery.js could save 37.5KiB (50% reduction) after compression.

- Minifying http://pen.io/assets/js/vendor/foundation.js could save 32.6KiB (50% reduction) after compression.

- Minifying http://pen.io/assets/js/vendor/what-input.js could save 1.4KiB (54% reduction) after compression.

Optimize images

Your images are optimized. Learn more about [optimizing images](#).

Prioritize visible content

You have the above-the-fold content properly prioritized. Learn more about [prioritizing visible content](#).

Mobile

94 / 100 User Experience

⚠ Consider Fixing:

Size content to viewport

The page content is too wide for the viewport, forcing the user to scroll horizontally. Size the page content to the viewport to provide a better user experience.

The page content is 559 CSS pixels wide, but the viewport is only 412 CSS pixels wide. The following elements fall outside the viewport:

- The element https://itsmyu...0adbd10b2127a8 falls outside the viewport.

- The element http://www.web...hoaava.vn.html falls outside the viewport.

- The element https://downfo.../nhakhoaava.vn falls outside the viewport.

- The element http://www.web...hoaava.vn.html falls outside the viewport.

Size tap targets appropriately

Some of the links/buttons on your webpage may be too small for a user to easily tap on a touchscreen. Consider making these tap targets larger to provide a better user experience.

The following tap targets are close to other nearby tap targets and may need additional spacing around them.

- The tap target https://itsmyu...0adbd10b2127a8 and 3 others are close to other tap targets.

Mobile

Avoid plugins

Your page does not appear to use plugins, which would prevent content from being usable on many platforms. Learn more about the importance of _avoiding plugins_.

Configure the viewport

Your page specifies a viewport matching the device's size, which allows it to render properly on all devices. Learn more about _configuring viewports_.

Use legible font sizes

The text on your page is legible. Learn more about _using legible font sizes_.
